Download fromGoogle Play Application UpdateRating: Description :P roCam X (HD Camera Pro) is a easy-to-use and high-quality application for anyone looking for a more comfortable and professional camera for their mobile devices. Here the user has direct access to exposure, focus, white balance, ISO and other settings that affect the end result. The program also works with video, including 4K. There's a lot more. As protection is for example, displaying different data in the file for greater comfort, photo settings, photo filters, convenient, programmable controls and so on. Features: + Burst camera mode with configurable lag for making stop-motion or time-lapse videos + Face Detection / Face Detection + Front Rear HD Camera Selection. + Professional Camera HD features: Scene Mode, Focus Mode, Burst Mode, Color Effects, White Balance and Manual Exposure Lock, Manual ISO. + Select and 4k video quality and resolution. + 4K camera recording (with optional audio recording) such as HD camera + Ability to turn off shutter sound. If you really want to become a photographer, you'll want a great camera to take really good pictures. However, your wallet doesn't allow that. All you have is an old camera on an outdated phone, the video capture software is too cramped to do much. You'll probably feel confused and don't know where to start. Then please introduce Procam X, this will be the appropriate solution for you. Turn your phone into a professional Camera Procam X is a professional application for photography for mobile phones, for low-speed phones with outdated camera sets. This app your phone's camera to a whole new level. If you've only ever been able to take pictures and videos at a resolution of only 480p, or 720p is just enough to look at, then now you can improve the quality of your photos and videos to 4K UHD. The software will make your phone camera smarter with ultra-modern camera algorithms. These algorithms will help the phone's camera set the image completely automatically. Additionally, you can use additional customized features. Discover advanced features of this photo application Many different modes The first feature of the application is to customize the focus of the image using 6 different modes. The first mode is autofocus. With this feature, the application adjusts the camera lens to automatically focus the image. The second mode is the Focus macro, which allows you to better take background photos when shooting details of objects near the camera. The third mode is focus lock. You click a specific point on the screen and the camera is locked at that point to focus until you click elsewhere to change another point. The fourth mode is Focus infinity. This mode is the exact opposite of Focus Macro mode, instead of removing the background, the objects in the distance will be bright and the objects near the camera will blur. The fifth mode is manual focus. In this mode the application gives you a lens simulator, you can surf to rotate like a real camera lens. The ultimate mode is to focus a continuous image. This mode makes it easy for the camera to focus on capturing moving objects. 4K Camera Recording also has features to adjust shutter speed, support for shooting and videos of fast moving objects. You can have the app edited automatically or customized to your liking if automatic mode isn't enough to meet your needs. This feature, combined with continuous image focus mode, makes it easy for the camera to keep up with fast-moving objects such as vehicles on the road or children playing in the park. The picture you take will now become more professional than ever. In addition, the application also allows you to adjust the brightness. You can also use this feature to select automatic or manual modes like other picture brightness adjustment modes. Along with adjusting the brightness, the application also allows you to adjust the light balance so that the image is suitable for the surrounding environment, such as electric light siet, cloud, sunlight, ... HDR, manual focus... You'll get that this exposure balance mode is actually like setting the color temperature for images if you adjust them manually. The higher the color temperature, the more colorful the image will be in warmer colors, and it will be red. If you set the color temperature to low, the image color will prefer a cold color that is blue. Another very excellent feature of this application is that it supports HDR photography, which helps Camera capture very clear images in the context of the scene, including a bright spot. Realtime Photo Filter Application has a very easy-to-see and easy-to-use interface. At the top of the application, the interface is a quick custom toolbar that allows you to quickly customize the camera without the hassle of steps. You can adjust the resolution of the image with a simple touch, or customize the sound to turn off the video, etc. If your phone has a built-in memory card, you can customize it. It is used to store photos and videos there to save space on your phone. In short, Procam X is a great application for amateur and professional photographers who specialize in taking pictures with their phones. The app turns your outdated camera into the better according to extremely modern camera algorithms. If you are passionate about photography and want to start a business, this app is a better choice. Selection.
